40 Jacintos por 5 departamentos = 200 Jacintos

Bolbos

PLANTAÇÃO DOS BOLBOS DE OUTONO

Os bolbos de flores que se plantam no outono florescem desde os meados do inverno até ao mês de junho e deve-se ter em conta que cada planta bulbosa tem a sua própria época de floração.

- Os bolbos não são exigentes quanto ao tipo de solo mas agradecem uma boa drenagem que oferece a areia composto contra a humidade constante do terreno argiloso.
- Ao plantar deve-se em conta a separação dos bolbos entre as diferentes espécies (ver quadro abaixo).
- É aconselhável demolhar os bolbos antes da plantação e regar bem nos primeiros dias pois propicia o crescimento das raízes.

PROFUNDIDADE DE PLANTAÇÃO
